

Assay and paired-spectrum log

Copy for each lake and analyte | every row needs a native and a reacted liquid spectrum

Lake / station / date:

Analyte / operator:

Kit manufacturer / SKU / lot / expiry:

L / U / species / unit:

Wavelength / cuvette / blank files:

Standard lot / concentration:

Preparation: actual volumes and calculated increment

Assay ID	Level	Dup.	Sample mL	Stock mL	Blank mL	Final mL	Actual delta	Prep time

Readings: paired files, reaction condition, and commercial reference

Assay ID	Native time	Native file	Reagent time	Reacted time	Reacted file	Kit value	QC / notes

Levels: 0, 2L, 5L, 10L. At P2, repeat 0 and 10L. Store original sample and blank CSV files.
Record reaction time and temperature, reference time, and any out-of-range or QC event in the CSV.
